

## **emco Internal Bond Pendulum Check** **Checking of the Internal Bond Tester**

**Test set according to Tappi T 569 and ISO 16260**

The test case contains:

- Test specimen for the measuring ranges Scott-Bond low and Scott-Bond high
- Adapter plate for Scott-Bond devices for knocking off the test specimen
- Statistical evaluation with meaningful interpretation of the technical condition of the Internal Bond Tester

The functionality of Scott-Bond Internal Bond Testers is checked on the basis of standardized test specimen from *emco* GmbH according to Tappi T 569 and ISO 16260. The adapter plate and collecting device of the **emco test set** guarantee a reproducible device check regarding the mechanical condition. The **emco Internal Bond Pendulum Check** provides a statement within a few minutes as to whether the tested device conforms to the Scott Bond Master device of PTS Heidenau. The test set is the ideal supplement to interlaboratory tests.
